● Travel App

The application is designed for booking hotels around the world. It is possible to book a tour from a hotel to any country, search for a tour by country name, view the list of available rooms, their interior, services provided, and whether they are available for booking. It is possible to view customer reviews and hotel advantages. Leave your messages in the feedback form. View a map showing the location of the hotel and the nearest store and pharmacy. It is also possible to subscribe to the hotel's newsletter.

Tech. stack: Next, TypeScript, Scss, Next-Intl, React Hook Form, Yup, Storybook, GraphQL, Apollo Client, Apollo Server, Mapbox GL, EmailJs, Jest, React Testing Library, Cypress, FSD.

Deploy Front-end: <https://kohnoa-travel-app.vercel.app/en>

Deploy Back-end: <https://apollo-server-orpin.vercel.app/>

GitHub Front-end: <https://github.com/KohnoA/travel-app>

GitHub Back-end: <https://github.com/KohnoA/apollo-server>

● Twitter Clone

The application is a clone of the popular Twitter application and is designed for hosting user blogs, with the ability to authorize an existing user, register a new user, edit a profile, add or delete a

tweet, attach a photo to a tweet, rate a tweet in the like format, display the number of likes, view the number of tweets individual user, search by tweets and users.

Tech. stack: React, TypeScript, Redux Toolkit, RTK-Query, Styled Components, React Hook Form, Jest, React Testing Library, Cypress, Firebase, Vite.

Deploy: <https://twitter-app-kohnoa.netlify.app>

GitHub: <https://github.com/KohnoA/twitter-app>

● React DatePicker

A library that provides an extensible and reusable calendar UI component for React, with the ability to select a date or date range, add a to-do list for each day, limit the maximum and minimum dates, change the start of the week (from Mon, Sun), display holidays and weekends, switch the view calendar (by weeks, months, years), as well as style customization.

Tech. stack: React, TypeScript, Styled Components, Storybook, Jest, React Testing Library, Rollup.

Deploy: <https://date-picker-ivory.vercel.app/?path=/story/>

GitHub: <https://github.com/KohnoA/date-picker>

● Currency Tracker

The application is designed to interact with various currencies; it is possible to view the current exchange rate against the dollar, convert the selected currency, view a graph of changes in the exchange rate for a certain period, and search for banks containing the required currency.

Tech. stack: React, TypeScript, Scss, React Leaflet, Jest, React Testing Library, Cypress, Apex Charts, Webpack.

Deploy: <https://currency-tracker-kohnoa.netlify.app/>

GitHub: <https://github.com/KohnoA/modsen-currency-tracker>

● Note App

Tech. stack: React, TypeScript, Ant-Design, Scss, Redux Toolkit, Redux Persist, Vite.

Deploy: <https://admirable-vacherin-d099c5.netlify.app/>

GitHub: <https://github.com/KohnoA/nyblecraft>

● Coffee House

Landing page for a coffee shop.

Tech. stack: Next.js, TypeScript, TailwindCSS, React-transition-group.

Deploy: <https://coffee-house-cyan.vercel.app/>

GitHub: <https://github.com/KohnoA/coffee-house>

● Vilkor.by

Landing page for small businesses (landscape and construction work).

Tech. stack: Next.js, TypeScript, SCSS, React-transition-group, React-intersection-observer, Swiper.js.

Deploy: <https://vilkor.vercel.app/>

GitHub: <https://github.com/KohnoA/vilkor>

● Online store (Teamwork)

Online goods store.

The application was created by a team of two developers, without the use of frameworks/libraries.

I have implemented: Application design, layout, cart page, 404 page, product page, modal window with a purchase form, product catalog on the main page, sorting, number of products on the main page, text search, changing the product catalog grid, routing by application via hash.

Tech. stack: TypeScript, HTML, SCSS, Jest, Webpack.

Deploy: <https://kohnoa-online-store.netlify.app/>

GitHub: <https://github.com/KohnoA/online-store>

● IEAT (Teamwork)

Web application, nutrition assistant. Search for recipes and useful information about it, power generator, calorie calculator.

The application was created by a team of 3 developers.

I have implemented: Initialization of the application, creation of the application layout, creation of the main page, calorie calculator page, login and registration forms, authorization in the application using Firebase, 404 page.

Tech stack: React, Redux Toolkit, TypeScript, SCSS, Swiper.js, Jest, Firebase.

Deploy: <https://rs-clone-ieat.netlify.app/>

GitHub: <https://github.com/KohnoA/rs-clone>

● Gem Puzzle

Web application, tag game.

Implemented: Game logic, game size variations (from 3x3 to 8x8), list of best results, game saving, ability to shuffle the game, game time, number of moves per game.

Tech. stack: JavaScript, HTML, SCSS, Webpack.

Deploy: <https://kohnoa.github.io/gem-puzzle/>

GitHub: <https://github.com/KohnoA/gem-puzzle>

● Song Bird

Web application, a quiz in which you need to guess the bird by its song.

Implemented: Game logic, music player using native technologies, translation of the application into two languages (English, Russian).

Tech. stack: JavaScript, HTML, SCSS, Webpack.

Deploy: <https://kohnoa.github.io/song-bird/>

GitHub: <https://github.com/KohnoA/song-bird>

● Momentum

A web application similar to the “Momentum” application from Google Market.

Implemented: a block with time, date and greeting, a quote block, a music player using native technologies, a weather widget (the city can be changed), changing the background, a to-do list tab, a settings tab.

Tech. stack: JavaScript, HTML, CSS.

Deploy: <https://kohnoa.github.io/momentum/>

GitHub: <https://github.com/KohnoA/momentum>

● GraphiQL (Teamwork)

Web application, an analogue of the GraphiQL library of the same name. GraphQL query sandbox for TheRickAndMortyAPI. (API only supports query requests).

The application was created by a team of 3 developers.

I have implemented: translation of the application into two languages (English, Belarusian), query editor (request field, response field, variables fields, headers, tab logic, error handling), adaptive application up to 320px.

Tech. stack: Next.js, Redux Toolkit, TypeScript, SCSS, React Hook Form, Next-i18next, GraphQL-request, Codemirror, Firebase.

Deploy: <https://graphiql-app-inky.vercel.app/>

GitHub: <https://github.com/rishat-se/graphiql-app>

● React Todo

Web application, todo-list.

Implemented: Adding tasks, editing, deleting, saving state on reboot, adaptive for resolutions up to 320px.

Tech. stack: React, Redux Toolkit, Redux Persist, TypeScript, TailwindCSS, Vite.

Deploy: <https://kohnoa-react-todo.netlify.app/>

GitHub: <https://github.com/KohnoA/react-todo>

● Travel

Educational project. Travel site.

Implemented: layout for PixelPerfect, adaptive up to 320px, slider in native JavaScript, burger menu, login form, registration form.

Tech. Stack: JavaScript, HTML, CSS.

Deploy: <https://kohnoa.github.io/travel/>

GitHub: <https://github.com/KohnoA/travel>

● Online zoo

Educational project. Volunteer project for the protection and care of animals.

Implemented: Two page sites (main, donate), layout for PixelPerfect, adaptive up to 320px, endless slider using native

JavaScript, comment carousel, logic for choosing the donation amount, creating styles using the SCSS preprocessor.

Tech. stack: HTML, SCSS, JavaScript.

Deploy: <https://kohnoa.github.io/online-zoo/pages/about/>

GitHub: <https://github.com/KohnoA/online-zoo>
